

***Spring + Fall Annual Plantings:***

Water immediately after planting, then, as needed. Depending on weather this may be every other day or once a week.

***Summer Annuals in Beds:***

More water is usually required for these plantings. If there is no irrigation, make sure to keep a close eye on annual plantings. If you see the plants wilting, it is definitely time to check the water!

When to water:

Immediately after planting

***Weeks 1-2:*** Every other day.

***Weeks 3+:*** Water 1-2 times per week, depending on environmental conditions.

***Summer Annuals in Containers:***

Containers need to be watered every day or every other day, depending on the environmental factors listed above. Containers that are especially root bound (lots of roots) or have been established for several months will need more water. When watering the container, go around the entire container with the watering can or wand—including the edges-- to make sure all of the soil is soaked.

When to water:

Immediately after planting, then every other day, and more established pots may need water every day.
